☰ South African energy crisis

Article [Talk](#)

From Wikipedia, the free encyclopedia

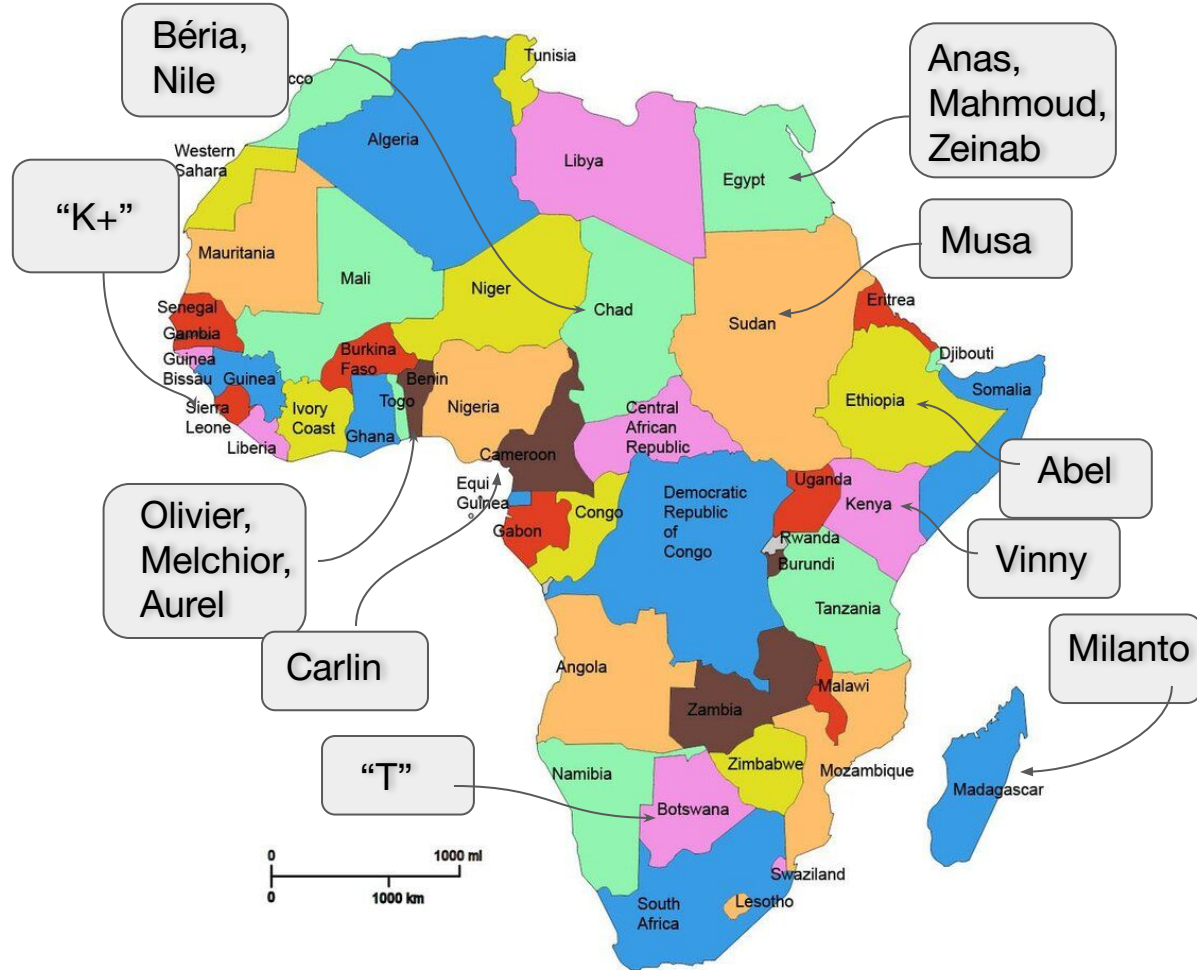

The **South African energy crisis** or load shedding is an ongoing period of widespread national blackouts of electricity supply. It began in the later months of 2007 towards the end of Thabo Mbeki's second term as president, and continues to the present.^{[1][2]} The South African government-owned national power utility, and primary power generator, Eskom, and various parliamentarians attributed these rolling blackouts to insufficient generation capacity.^[3]
